

# Tricks for Query Strings

Last Modified on 10/23/2023 8:37 pm EDT

Using query strings allows you to modify your website to deliver different visitor experiences. There are a few advanced tricks that can be achieved by adding the parameters below to the end of the query string.

A query string is a set of characters tacked onto the end of a URL (with no spaces). The query string begins after the question mark (?) and can include one or more parameters.

The query string below is shown in bold.

## JavaScript Method

```
<script type="text/javascript"
src="https://app.jackrabbitclass.com/jr3.0/Openings/OpeningsJS?OrgID=XXXXXX&hidecols=Description,Gender&showcols=L
</script>
```

## Direct Method

```
https://app.jackrabbitclass.com/jr3.0/Openings/OpeningsDirect?OrgID=XXXXXX&hidecols=Description,Gender&showcols=Lo
```
