

Convert Traditional Online Class Listing Table Code to Mobile-Friendly Table Code

Last Modified on 12/05/2023 2:43 pm EST

From Jackrabbit's inception until late 2015, the Online Class Listings JavaScript code and URLs (links) used were "traditional" code/links that displayed with table borders and weren't mobile-friendly (meaning they didn't display well on mobile devices).

In 2015, Jackrabbit developed new responsive code that automatically transforms into vertical display on small screens (the website must be optimized for mobile viewing).

The code and links in this Help Center are the updated responsive code/links. If you use these code/links and your site is mobile-optimized, the Online Class Listings will work correctly on cell phones, iPads, etc.

Not sure if your website is optimized to be mobile-friendly? Contact your website administrator. Your website may require site modifications and CSS changes to work optimally with the responsive listings tables. Jackrabbit cannot advise you or update your website to be mobile-optimized.
