

# Requirements for Processing EMV Chip Cards

Last Modified on 11/18/2024 12:04 pm EST

EMV integration is not available for Mac users or users in Canada at this time.

When you are set up for processing [ePayments in Jackrabbit](#) and want to process EMV Chip cards, you will require the following:

- **Windows 10 and higher**
- **TYSYS Swipe Account with C&H Financial or SafeSave Payments**
- **Ingenico iPP320 Card Terminal**

If you are already using a card swiper...

- and you have a C&H Financial traditional plan, you likely already have a TYSYS swipe account.
- and you have a C&H Financial Simple Plan account, you will need to contact them to set up a TYSYS swipe account.
- and SafeSave Payments is your payment partner you will need to contact them to apply for a TYSYS swipe account. SafeSave will submit your application. **Once it is approved, it is your responsibility to contact Vantiv directly to cancel your Vantiv swipe account.**

If you are not already using a card swiper you will need to contact your payment partner to get the TYSYS swipe account opened. Go to the *Gear (icon) > Settings > ePayments > Credit Cards/Bank Account Settings > Manage Settings button* to locate their contact information

## Ingenico iPP320 Card Terminal

This terminal must be purchased through your payment partner (gateway provider).

You can find their contact information in your Jackrabbit system from the *Gear (icon) > Settings > ePayments > Credit Cards/Bank Account Settings > Manage Settings button*.
