

Get Set Up for Text Messaging with Twilio

Last Modified on 01/17/2024 4:22 pm EST

In order to send text messages using Twilio, you must first set up an account with Twilio and then link it to Jackrabbit using the steps below. **Note:** For clients outside the US and Canada, please reach out to [Jackrabbit Support](#) if you need help setting up your Twilio account.

An alternative to sending text messages through Twilio, you may want to consider [Jackrabbit Plus](#), a mobile app that is custom-branded for your business, integrates with the Jackrabbit Parent Portal, and supports sending "push notifications."
