

# Work with the Information in Grids

Last Modified on 06/18/2024 10:00 am EDT

Throughout Jackrabbit, you will see grids, which are sometimes referred to as tables. These grids display the data you have entered into Jackrabbit; they are incredibly robust - allowing you to group, sort, filter for specific information, and more. **Note: the features available in each grid throughout Jackrabbit may vary.**

## Sample Grid

- 1 Breadcrumbs display the currently selected filters.
- 2 Drag and drop a column header into the grouping bar to group results.
- 3 Click a row menu to open action options for that row.
- 4 Page number displays up to 250 items per page.
- 5 When a column filter is applied, the column menu is highlighted in blue.
- 6 Column menu offers options to sort, display, and filter the data within the column (options in this menu vary depending on the grid).
- 7 Manage Certifications opens the Drop-down List Editor to edit (for the Certifications page only).
- 8 Adjust columns, Send Message, Refresh Grid, Add New icon (action icons available will vary between grids), More (varies by grid).
- 9 Slider shows more columns in the grid.

---

**Expand/Collapse  
All**

## Group Your Data

Drag and drop **column headers** to the *grouping bar* to create groups within your report.

- Click on the column title in the grouping bar to re-sort the column in ascending or descending order.
- When multiple columns are added to the grouping bar, the first column on the left is the first

level of grouping. The second column added to the grouping bar will group the rows within the first column, etc.

- Click and drag the **column headers** left or right within the *grouping bar* to change the order.
- Use the **X** in the column header to clear a column from the *grouping bar*.

## Sort and Filter Data in the Grid

There are multiple ways you can sort and filter data in a grid. Select the options that work best for you:

<p>You can reorder the columns in a grid by clicking and dragging them to the spots you want them in. Double arrowheads indicate where the column will drop (behind the arrowheads).</p>	
<p>Click on the <i>column header</i> to sort in ascending or descending order. An arrow displays to show the current sorting order; no arrow indicates that no sorting has been done on the column.</p>	
<p>Use the <i>column menu</i> to access the sorting options for each column.</p> <ul style="list-style-type: none"> <li>• Ascending order</li> <li>• Descending order</li> </ul>	
<p>Multi-sort columns in the grid, for example:</p> <ul style="list-style-type: none"> <li>• Click the <b>Family</b> <i>column header</i> to sort the column in ascending order A-Z (as on the right). An up arrow and the number 1 indicates this is the 1st column in the sort.</li> <li>• Next, click the <b>Status</b> <i>column header</i> and all the active families will be listed first in the grid. An up arrow and the number 2 indicates this is the 2nd column in the sort.</li> <li>• The column width expands to show the sorting information.</li> </ul>	
<ul style="list-style-type: none"> <li>• Click <b>Columns</b> in the <i>column menu</i> to select the columns you would like to view in your grid.</li> </ul>	

- Click **Set Column Position** in the *column menu* to lock/unlock a column. When a column is locked, you can scroll horizontally, and the column will always remain in the display.

Use the *horizontal scroll bar* (lower right when visible) to move the grid from left to right.

- Click **Filter** in the *column menu* to drill down further into your column data (only available in some grids).
- More than one column can be filtered at a time.
- Applied filters display in the *breadcrumb bar*.
- The *column menu* for a filtered column is highlighted in blue.
- Column filters vary depending on the data in the column. Some filtering will list all values in the column with checkboxes and a search field while other filters allow you to define the filter with options such as "*Is equal to*" or "*Contains*".

Many grids offer column searching, which allows you to find information within a column quickly. For example, on the **All Students** page, you can enter a student's name in the search field of the Student column. The grid will then display only the rows that contain that name in the Student column.

## Take Action

Each grid is designed to provide ease of use and to simplify different actions you may want to take. Work with an individual record (e.g., a specific family), or apply an action to several records at once (mass action).

### Action Icons

Located on the right-hand side of the grid, the action icons available will vary between grids.

Click the **Adjust columns** icon to squeeze or expand the columns in the grid. *Squeeze grid* allows you to see all the columns on the page. *Expand grid* makes the columns wider and you may have to use the slider (bottom right) to horizontally scroll, depending on the number of columns in the grid. Either view can be saved as default or favorite view.

	<p><b>Send a Message</b> - Choose to send an <a href="#">email</a>, <a href="#">push notification</a>, or <a href="#">text message</a> to chosen recipients in the selected records, e.g., Primary Contacts only, or Primary, Billing, and Other Contacts.</p> <ul style="list-style-type: none"> <li>• Select the checkbox for the records (e.g., families or students) you want to be included in the message. You can select individual records across multiple pages.</li> <li>• To send to all rows displayed on a page (max. 250/page), select the checkbox in the column header.</li> <li>• To send to ALL records on ALL pages, leave all checkboxes empty. All records will be included.</li> </ul>
	<p>Use the <b>Refresh Grid</b> icon to reload the data in the grid after making a change.</p>
	<p>Click the <b>Add New</b> icon to open a pop-up window to add new data. This icon is visible depending on which grid you are viewing, for example, on the Staff Certifications page <i>Add New Certificate</i> window opens or on the All Families page an <i>Add New Family</i> window opens.</p> <p>If any rows are selected in the grid, an <i>Add New</i> icon will not be visible.</p>
	<p>Use the <b>More</b> icon to access actions that can be taken with one or more records at once. The options available will differ between grids, e.g., in <i>All Families</i>, you can update Family Fixed Fees, Family Discounts, Clear UDF Answers, and more. In <i>All Students</i>, you can update Student Fixed Fees, Add a Note, and more.</p> <ul style="list-style-type: none"> <li>• Select the checkbox for the rows you want to have included in mass action. You can select individual rows across multiple pages or select the checkbox in the column header to select all rows <b>currently displayed on the page</b> (max 250/page).</li> </ul> <p>Print and Export functions (where available) are accessed from the More icon. Depending on how you have customized the grid, printing may take some setting adjustments. Check out this short video tutorial <a href="#">Print from Grids in Jackrabbit</a> for tips.</p>

## Row Actions

Click on the **Row Menu** to access actions that can be taken with the record in that row. The row actions offered will vary between the different grids in Jackrabbit and may include:

- **View/Edit** - click on the link to open the content in the row and make changes.
- **Delete** - remove a row from that grid.
- **Add a Note** - add a note to the record.
- **Additional actions** - click on the row menu to see the other action options.

If any checkboxes are selected in the first column of a grid, the row menus are deactivated and are no longer visible.

## Data Visuals

Some of the grids in Jackrabbit have visual elements, referred to as *data visuals*. Click on the sections of the visual to see the information populate in the grid results.

In addition, there is a filter drawer to make additional selections that narrow down results in the grid. Within the filter drawer, the criteria are organized into sections. Use the search field at the top of the drawer to locate specific criteria and be taken directly to the matching filter. Use the *Expand All* link to open all sections or the arrow next to each section header to open individual sections. Click the **Apply** button to filter the data in your grid using the criteria you selected; these filters will display in the breadcrumb bar.

- Save your filtered data as a *Favorite*. Once filters are selected, click the *Save as favorite (icon)* , enter a favorite name, choose if you want to make the favorite a default view, and decide if you want to share with your team. Your filtered data, column width, column locked positions are all saved. Click *Save*.
- Load a *Favorite* by clicking on the *Favorites (icon)* , select your saved favorite from the drop-down list, and click *Load*. The grid populates the data and the breadcrumbs indicate the selected filters.

Refer to [Work with All Families - View, Search, and Take Action](#), [Work with All Students - View, Search, and Take Action](#), and [Work with All Classes - View, Search, and Take Action](#) for more details on the All Families, All Students, and ALL Classes data visuals.

When you are working with the [All Families](#), [All Students](#), or [All Classes](#) grids, you can save all of your grid customizations as a favorite that you can make your default view. Learn how to [Save & Load Your Favorite View](#)
