

# Online Registration Form - Limit Classes to One Location

Last Modified on 11/09/2021 9:48 am EST

If your organization has multiple locations, you may only want to show classes from a single location on your Online Registration form. You can accomplish this by modifying the HTML code (link) you are using on your webpage to open the form, for example with a "Click Here to Register" link.

The basic HTML code starts here: <https://app3.jackrabbitclass.com/regv2.asp?id=XXXXXX>

Where XXXXXX is your Organization ID.

To limit your Online Registration form to open for a specific Location you will add **&Loc=locationcode** to the basic HTML code shown above.

## Example

If your Org ID is 522358 and you have a Location named Jackrabbit Education with a Location Code of **EDU**, you would add **&Loc=EDU** immediately after the last digit of the Org ID.

Manage Locations									
All data within your database is assigned a Location (Families/Accounts, Students, Classes, Events, etc.) A minimum of one location is required.									
<a href="#">Add Location</a>									
View 1 - 1 of 1 <span>Print</span> <span>Refresh</span> <span>Show/Hide Columns</span>									
Edit	Code	Name	Phone	Fax	City	State/Prov	Contact	Contact Phone	Website
	EDU	Jackrabbit Education	(704) 895-4034		Huntersville	NC			<a href="http://www.jackrabbitclass.com">www.jackrabbitclass.com</a>

The link code would be: <https://app3.jackrabbitclass.com/regv2.asp?id=522358&loc=edu>

This will auto-assign the registering family to the Jackrabbit Education Location as well as only show classes in that Location to choose from.
