

# Online Registration Form - Limit Classes to One Location

Last Modified on 09/02/2024 1:26 pm EDT

If your organization has multiple locations, you may only want to show classes from a single location on your Online Registration form. To accomplish this, modify the HTML code (link) you use on your webpage to open the form, for example, with a "Click Here to Register" link.

The basic HTML code starts here: <https://app3.jackrabbitclass.com/regv2.asp?id=XXXXXX>

Where XXXXXX is your Organization ID.

To limit your Online Registration form to open for a specific Location you will add **&Loc=locationcode** to the basic HTML code shown above.

## Example

If your Org ID is XXXXXX and you have a Location named Jackrabbit Education with a Location Code of **EDU**, you would add **&Loc=EDU** immediately after the last digit of the Org ID.

The link code would be: <https://app3.jackrabbitclass.com/regv2.asp?id=XXXXXX&loc=edu>

This will auto-assign the registering family to the Jackrabbit Education Location and only show classes in that Location.
