Connect Jackrabbit enrollment data to Google Sheets with Zapier   Share

Issue/Question

Is there a way to connect enrollment to a Google Sheet that would allow me to have enrollment numbers automatically feed into it from Jackrabbit?

Resolution

Yes! Jackrabbit integrates with Zapier, allowing you to automatically feed student enrollment data into a Google Sheet.

Once you have set up your Zapier connection in Jackrabbit, follow these steps to create your Zap:

1. In Zapier, select **Jackrabbit Class** as your trigger app.
2. Choose the **Student Enrolled** trigger event.
3. Test the trigger to ensure the correct data is pulled.
4. Select **Google Sheets** as your action app.
5. Choose the **Create Spreadsheet Row** action event.
6. Map the Jackrabbit fields to the corresponding columns in your Google Sheet.
7. Test the action.
8. Once everything looks good, click **Publish** to activate your Zap.
